

**AMENDMENTS TO THE CLAIMS:**

The following Listing of Claims will replace all prior versions, and listing of claims in the Application:

Listing of Claims:

Claim 1 (Currently Amended) A bicycle rack comprising:

two tubes (10, 10') each having a rod (21) extending from a first end thereof and a clamp mechanisms (20) connected to each rod (21), two stretch links (40, 50) connected between the two tubes (10, 10');

two retainers (31) respectively connected to two respective insides of the two tubes (10, 10') and located at two respective second ends of the two tubes (10, 10'), the two retainers (31) each having a recess (311) so as to be adapted to clamp a frame (60) with a connection sphere between the two retainers (31); and an engaging member (12) pivotably connected to one of the two tubes.

2. (Currently Amended) A bicycle rack comprising:

two tubes (10, 10') each having a rod (21) extending from a first end thereof and clamp mechanisms (20) connected to each rod (21), two stretch links (40, 50) connected between the two tubes (10, 10');

two retainers (31) respectively connected to two respective insides of the two tubes (10, 10') and located at two respective second ends of the two tubes (10, 10'), the two retainers (31) each having a recess (311) so as to be adapted to clamp a frame (60) with a connection sphere between the two retainers (31); and

~~The bicycle rack as claimed in claim 1 further comprising~~ a loop (11) pivotably connected to one of the two tubes and an engaging member (12) pivotably connected to the other tube (10), the loop (11) removably engaged with the engaging member (12) so as to pull the two tubes (10, 10') toward each other.

3. (Original) The bicycle rack as claimed in claim 2, wherein the engaging member (12) includes a groove (121) defined in a first end thereof and the loop (11) is engaged with the groove (121).

4. (Original) The bicycle rack as claimed in claim 3, wherein a screw (43) extends through a second end of the engaging member (12) and is threadedly connected to the stretch link (40), a pivotal point for connecting the engaging member (12) to the tube (10) is located between the groove (121) and the screw (43).

5. (Currently Amended) The bicycle rack as claimed in claim 1, wherein ~~each of the~~ said clamp mechanisms (20) includes a sleeve (221), said

sleeve being mounted ~~for being mount~~ on the rod (21) and two clamp members (222) connected to the sleeve (221), a clamp plate (224) extending from one of the clamp members (222) and having a plurality of holes (224A), a protrusion (222A) extending from the other clamp member (222) and engaged with one of the holes (224A), a longitudinal axis of the clamp plate (224) being parallel with an axis of the rod (21) corresponding thereto.

Claim 6 (Canceled).

7. (Currently Amended) A bicycle rack comprising:

two tubes (10, 10' ) each having a rod (21) extending from a first end thereof and clamp mechanisms (20) connected to each rod (21), two stretch links (40, 50) connected between the two tubes (10, 10' ), said clamp mechanisms (20) including a sleeve (221), said sleeve being mounted on the rod (21); two clamp members (222) connected to the sleeve (221); a clamp plate (224) extending from one of the clamp members (222) and having a plurality of holes (224A); a protrusion (222A) extending from the other clamp member (222) and engaged with one of the holes (224A); a longitudinal axis of the clamp plate (224) being parallel with an axis of the rod (21) corresponding thereto;

two retainers (31) respectively connected to two respective insides of the two tubes (10, 10' ) and located at two respective second ends of the two tubes

(10, 10'), the two retainers (31) each having a recess (311) so as to be adapted to clamp a frame (60) with a connection sphere between the two retainers (31); and

~~The bicycle rack as claimed in claim 6 further comprising a loop (11)~~  
pivotably connected to one of the two tubes and an engaging member (12)  
pivotably connected to the other tube (10), the loop (11) removably engaged with  
the engaging member (12) so as to pull the two tubes (10, 10') toward each other.

8. (Original) The bicycle rack as claimed in claim 7, wherein the  
engaging member (12) includes a groove (121) defined in a first end thereof and  
the loop (11) is engaged with the groove (121).

9. (Original) The bicycle rack as claimed in claim 7, wherein a screw  
(43) extends through a second end of the engaging member (12) and is threadedly  
connected to the stretch link (40), a pivotal point for connecting the engaging  
member (12) to the tube (10) is located between the groove (121) and the screw  
(43).
